This high quality universal throttle cable kit includes **2.35m** of standard black conduit (6mm \varnothing) with Teflon liner, **2.60m** of inner wire and selection of fittings. One end of the inner wire is fitted with a carburetor nipple (EE7 3mm \varnothing x 3mm). The other end will need to be cut to length and the required nipple soldered in place. The ferrules and adjusters are a snug fit on the conduit. They can be bonded in place during the assembly with glue or use a centre punch to make a small indentation in their side. The fittings can be adapted for a range of models. Basic soldering kit is needed to solder the nipples in place.
